

terranguard™

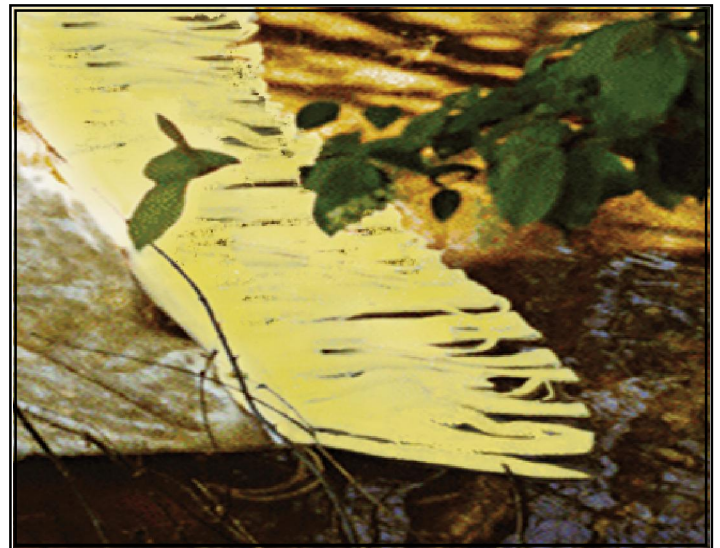

The complete shoreline protection system

Stops and absorbs oil before it reaches the shoreline

Absorbs bulk amounts of oil above and below water's surface with virtually no water absorption

Infused with patented Mycelx which binds to hydrocarbons and allows water to pass through freely

Available in 10 foot Interconnecting units

- Terraguard is a complete shore line protection system utilizing patented Mycelx infusion technology. Mycelx technology allows Terraguard to bind instantly to hydrocarbons and allows water to pass through freely.
- Terraguard's design allows absorption of bulk amounts of oil both above and below the surface of the water thus protecting against oil, emulsified oil, tarballs, heavy sunken oil, and sheen. The Terraguard has sections that float on the water and sections with ballast that suspend under the surface which means that it is less effected by rough water and tidal movement.
- Unlike products made from melted blown polypropylene, Terraguard will absorb over 15 times it's weight in hydrocarbon pollution while absorbing little to no water.
- To order Terraguard, 8-TG1, call Centek Industries at 1-229-228-7653.
